Priming  
Gun

## Model 2092 Pro-Gress Hand Priming Gun...

### DESCRIPTION

The Model 2092 Hand Priming Gun is used to prime and purge Divider Valve Lubrication Systems.

Divider Valve Lubrication Systems often use a type of pump that does not allow priming of the lubrication system prior to start up.

It is therefore necessary to use a hand priming gun to fill the lubrication lines and to purge the lines of air and any debris.

The Lubricator or Pump will normally have a Discharge Manifold Bar or an Anchor Cross mounted on the pumps discharge side.

The manifold bar or anchor cross will have a Purge Port Check Valve installed and normally plugged.

By removing the plug, you can connect the male threaded adapter supplied with the hand priming gun. You can then prime and purge the lubrication system.

These manual priming guns are very helpful in the field for servicing and trouble-shooting lubrication systems and its is recommended that service personnel have access to a hand priming gun when servicing all divider valve lubrication systems.

### Features;

- Heavy Wall Acrylic Tube
- High Volume Manual Pump
- Re-Enforcing Collar to prevent Tube breakage
- Liquid Filled Pressure Gauge
- High Pressure Flexible Hose
- 1/4" NPT Swivel Type Fitting
- Large Knurled End Cap for Easy Filling
- Discharge Check Valve
- Viton Seals
- Good for Petroleum and Synthetic Base Oils
